To whom it may concern,

Bennett and I worked together on the A/B testing team at Dell. This team worked at a fast pace, and operated within an agile environment, producing multiple versions of an interface for a particular page or process per week. We collaborated with an international team of internal stakeholders. As a UX Architect, I was impressed by Bennett's ability to create visual comps that fully captured the spirit and intention of my wireframes. One of the great things about working with Bennett is his collaborative nature and easy-going personality. We routinely worked very closely to go over requirements and potential pathways to take with our testing variants and he was always generous with time, open to ideas, and articulate in his feedback.

Bennett's work was always on time and pixel perfect. Apart from his role in creating visual assets, he also had to consistently present his work to stakeholders, which required an in-depth understanding of both the interaction patterns of the design, and also the technical constraints of working with a production layer of code. Bennett presents his ideas in a directed, self-assured way, and answers questions with patience and grace.

Even after he moved onto other teams, Bennett remained a valuable resource for lending a trusted opinion on UI design. He is someone I trust for professional feedback and enjoy talking to about design. I highly recommend Bennett Stavely as a part of any product team and hope to work with him in the near future.
